Google will offer six apprenticeship tracks in the United States this year, located across our Atlanta, Austin, Chicago, and New York offices, as well as a limited number of remote offerings. Please see below for additional details:

Program overview
Google’s U.S. Apprenticeships are paid structured learning and development opportunities that provide on-the-job training and related technical instruction, and career development workshops. Upon program completion, apprentices receive a nationally-recognized credential certified by the U.S. Department of Labor. Most of our tracks also include completing the corresponding Google Career Certificate. Program tracks are 20 months in duration, except for the Information Technology (IT) track, which is 12 months.

Professional tracks include:

- Data Analytics
- Digital Marketing
- Information Technology (IT)
- Project Management
- Software Engineering
- User Experience (UX)

Applicants should have a high school diploma or GED equivalent and less than a year of relevant experience in the Apprenticeship track of interest. Candidates should not currently be enrolled or have completed a Bachelor’s, Master’s, or PhD program in a related field to the track they are interested in applying for.

We encourage candidates to review the application requirements and apply before the deadline - April 25, 2023. Candidates will need an updated resume for their application. View Google’s U.S. Apprenticeship opportunities and apply!

For more information, please visit the U.S. tab on our Apprenticeships homepage and check out the on-demand info session available on Careers OnAir.
